

ScopeGuard Installation Instructions:

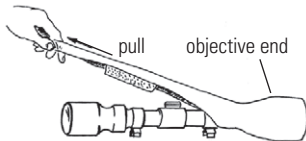

- 1) Approximate length of Scope Guard by holding it up to your scope. (Keep in mind the velcro should be centered between mounts.)

- 2) With a sharp pair of scissors, cut each end to fit scope's length.

- 3) Pull neoprene over the objective first, then the eyepiece.

- 4) Attach velcro in center and adjust for perfect fit. Seam should run along bottom of scope.

*NOTE: You do not need to remove your scope from the gun to install Scope Guard. Also, if you have larger target caps you may need additional slits where each cap is located. This will provide additional stretch. A 1/2"-3/4" incision works best.

Proper Care and Handling

If your scope or gun is subjected to rain, snow, or other moisture, remove Scope Guard and wipe off scope with a dry towel.
